

STARHAZER III WATER HAZE MACHINE AND BUBBLES AMAZE LDI '06

CITC once again amazed the crowds of people gathered at their booth to see the first time, first ever, Bubble Monster that produced up to 12" bubbles and their first non-heating, water haze machine for theater, called the StarHazer III - Water Haze Machine.

CITC's StarHazer III – Water Haze Machine is the first of its kind. The most user friendly water-based hazer on the market today, you just push a button and get instant haze...no heat, no oil, no wait time. With a compressor inside, 2 fans, and sound insulation, this quiet hazer will be the #1 choice for most water-based haze needs in 2007.

LDI '06 Brought Great Minds Together

Florian from the Smoke Factory in Germany, Kazuo Inoue from The Rock Corporation in Japan, and Gary Crawford of CITC combined their efforts to introduce a new water haze machine for Japan that would emit instant haze without heating. "With all of the positive input by our customers, we saw a big demand for this type of unit here in the USA." said Gary Crawford.

A SHORT CITC DEALER SEMINAR gave plenty of time (and treats) for everyone to enjoy and see all of the new equipment, including the great output of the **Polar Controller low-ground fogger**. Included are 2 remote controls (fog and cold control). Also included are the 2 cold tubes, over 5" diameter and 8' long, keep the fog cold and low to the ground for longer distances as well as a drier fog for cleaner floors (dryness is impossible when using dry ice/hot water foggers).

Best Comments:

1. No CO2....Yeah!
2. I can use normal plug-in's without special wiring!
3. Great white low-ground fog with good volume
4. I've seen them all and I want your unit for my job

CITC ANNOUNCEMENTS

At the Cirque de Soleil show, "KA", you could see the effects of eight CITC Little Blizzard® SP/DMX units using Super Extra Dry Fluid. This was an exhilarating show with a hydraulic stage and so much excitement coming from every direction. Our Super Extra Dry fluid is designed for the quickest evaporation, producing floating flakes.
