

Why The Little Blizzard® and Little Blizzard® Sound Proof Snow Machines Are Better Than All the Rest

When CITC designed a quiet snow machine in 1993 that could run continuously and throw realistic looking snowflakes made from an evaporative liquid, it became a technical achievement for the "snow effects" industry. Now CITC has 6 models in 120vac and 6 in 230vac for international customers.

The Little Blizzard® has superior technology. Then you have the professional line of the Little Blizzard® machines that are much quieter. Not only do they have more sound insulation than any machine on the market today, but it also has a newly designed reverse-sound, venturi system that bends sound waves.

Even quieter is the Little Blizzard® Sound Proof (SP). Besides being the quietest snow machine in the world, the Little Blizzard® SP/DMX has several features that set it apart from the imitators. Included is:

- A control that changes the size of the flakes with a mere touch of a lever, called the Flake Size Adjuster
- Easy to Install Compact Size yet fully quiet to a whisper
- A safety fuse with extra fuse included
- More insulation with reverse sound deadening nozzle opening
- Heavy-duty powder-coating
- Curved vents that bend sound waves and filter in-bound air
- A DMX control with "in/out" 5-pin XLR connectors for daisy chaining several machines from one remote control.
- Adjustable Hanging bracket Included with hardware.
- Continuously "snows"; will never heat up like the imitators do in 10 minutes*

Now you can control the perfect size snowflakes and have them float (not fall like rain drops or clumps of foam) until they evaporate. What a big difference! When used as directed, Little Blizzard® Snow Fluid leaves no residue or mess to clean up. The snow gently floats longer than ever to create the magic of a full auditorium, yet evaporates magically as soon as it touches anything.

Several Little Blizzard® models are now available in 120v or 230v:

1. The Santa Snow Machine with remote control and two speed motor.
2. Little Blizzard® Regular (continuous snow, 2-speed, flake size lever, insulation for quieter running, remote on/off/volume, analog model or digital DMX model)
3. Little Blizzard® SP (76% more quietness with continuous snow technology, 2-speed motor, insulation for quieter running, remote on/off/volume control, with DMX on-board) (analog available to match with older style machines).

Several types of Little Blizzard® fluids are available:

1. Super Extra Dry
2. Basic (wetter flakes, similar to imitator's fluids),
3. Extra Dry, (evaporates within 50')

4. Dry, (evaporate between 50'-100')
5. Dry 100, (for traveling over 100')
6. UV Light Blue, (always in Extra Dry formula)
7. UV Light Pink, (always in Extra Dry formula)
8. UV Bluish White (see full explanation at <http://www.citcfx.com/products/fluids.htm>)

When you order analog machines (without the DMX), you can combine them with the 3 pin XLR connector units (all of our originally designed models). This makes it possible to buy a new machine and still have it work with all of the other models that you have in rental or in your show now. (Please note: you can use a DMX converter with your analog unit, but it does take two channels of DMX for these units, whereas the newer models with DMX onboard use only one channel of DMX to control on/off and volume).

Compare the quality and uniqueness of CITC's Regular Little Blizzard® and SP snow machines with the imitators.

Feature	Reg. Little Blizzard®	Little Blizzard® SP	Imitators
Fused	YES	YES	NO
Sound rating	74-78db	69-72db	82-89db
Bracket Included	YES	YES	NO/+\$100
In/Out Remote Control	YES	YES	In only
Flake Size Lever	YES	YES	NO
Fluid Consumption	1 gal per hour	1 gal per hour	1 gal per 1/2hr
Motor Overheat*	NONE	NONE	YES - 10 mins
Machine Screws	YES	YES	NO
6 Layers insulation	YES	YES + Motor	NO
Sound Separators	YES	YES + Motor	NO
Baffled Sound Intake	YES	YES	NO
Dirt Intake Filters	NO	YES	NO
Floating Snow Technology	YES	YES	NO
Highest Value per db rate	YES	YES	NO
Independent connectors	YES	YES	NO
