

Fantasy FX Applications

Fantasy FX is a long lasting, non-irritating, odorless haze that can be used for a multitude of special effects! Most haze effects will need to be backlit. Here are just a few ideas:

- 1) Highlighting beams of light
- 2) Making a cloud (place a bright light behind a spray of haze)
- 3) Extending and illuminating mirror ball reflections
- 4) Adding "dream FX" to photographs
- 5) Illuminating laser beams
- 6) Steam effects
- 7) Haze Effects each 20 second spray lasts 30 minutes
- 8) Smoke Effects
 Backlight with bright colors in a dark room for dramatic contrast!
- 9) Highlighting burglar alarm beams, as seen in the movie "Entrapment"
- 10) Use haze to signify a "back in time" sequence
